

High-Yield Regenerative Real Estate in the Panama Corridor

Leveraging a \$450,000 Land Asset with \$18M in CapEx to Unlock \$35M in Gross Sales and 11.1% Ongoing Yield

The Site

50 pristine hectares in Cañita, Panama, independently appraised at an attractive entry basis of \$450,000.

The Strategy

Asset-light joint venture utilizing a PropCo/OpCo split to eliminate land acquisition drag.

The Team

Over 500 years of combined executive experience spanning forestry restoration, prefab construction, finance, and LATAM contract law.

Maximizing Capital Efficiency, Minimizing Risk

Separating Land Ownership from Operational Liabilities

Landowner Alignment

- ✓ The landowner receives a predictable 4.5% baseline fixed yield (\$20,250/year) plus a 5% top-line gross revenue share.

Investor Protection

- ✓ 100% of investor CapEx (\$18M) goes directly into tangible, income-generating infrastructure (modular prefab villas, solar microgrid, agroforestry crops).

Legal Security

- ✓ The master lease is registered at the Registro Público de Panamá, ensuring long-term operational rights that survive any land title transfers.

Infrastructure-Led Sustainable Development

Allocating Capital into Scalable, Tangible, and Eco-Friendly Assets

Phase 1 Infrastructure

- ✓ High-end modular prefab construction for luxury glamping rentals and premium hospitality structures.

Eco-Utility Deployment

- ✓ On-site grid-scale solar microgrids and industrial-grade water recycling loops for complete off-grid resilience.

Regenerative Agriculture

- ✓ Scaling rain forest agroforestry and managed forestry systems to rapidly restore soil and maximize carbon asset value.

\$18,000,000 Capital Deployment Breakdown

Allocation breakdown across 50 hectares of Agroforestry development

Agroforestry Planting & Crop Establishment

\$1,306,000 (35%)

Land Preparation & Infrastructure

\$4,500,000 (25%)

Operational Facilities & Equipment (OpCo)

\$8,600,000 (20%)

Working Capital & Maintenance (Years 1-3)

\$2,160,000 (12%)

Contingency & Legal Reserves

\$1,440,000 (8%)

Total Budget

\$18,000,000 | Metric: \$360,000 / Hectare

Unlocking Asymmetric Upside

\$35,000,000 Phase 1 Sales & \$2,000,000 Annual Recurring Revenue

Phase 1 Liquidity Event

- ✓ Projected gross sales of \$35,000,000 through premium villa sales, initial carbon monetization, and ecosystem positioning.

Investor Payout Priority

- ✓ 100% of initial Phase 1 net cash flow is funneled directly to outside investors until the \$18M CapEx is completely repaid.

Ongoing Yield Engine

- ✓ Transition into Phase 2 yields \$2,000,000 in Annual Recurring Revenue (ARR) from luxury glamping, eco-tours, and agroforestry harvests.

Unrivaled Operational Buffer

- ✓ The fixed land lease (\$20,250) represents a mere 1.01% drag on the annual recurring revenue pool.

Phase 1: Capital Repayment

(100% Payout Priority – \$18M CapEx Target)

Phase 2: Ongoing Yield Engine

(\$2,000,000 ARR from Operations)

Phase 3: Surplus & Upside

(Remaining Distributions / High Return)

Regulatory Tailwinds & Institutional ESG Compliance

De-Risking the Asset via Panama's Sovereign Pro-Eco Incentives

Law 122 Tourism Incentives

Accessing 100% tax credits for foreign investors and a 15-year corporate income tax holiday on hospitality operations.

Reforestation Law 69 Subsidies

0% real estate property tax on the 50-hectare parcel and 0% capital gains tax on timber and agricultural yields.

Institutional De-Risking

Project frameworks pre-aligned with IDB Invest and IFC blended climate finance parameters to allow for future debt refinancing.
